

PGCME 2015-Comments

- Please make technical discussion classes also clinically oriented. 2) Case discussion- more interactive; felt like Rusting.3. Please put all topics in our not only 3 of the topics there; rest only names, when we tried to down load no ppt was there.
- 15-30 minutes lunch break is enough. Try to finish the session before 5Pm
- A 5 min break between 2 consequents sessions will be helpful. Apart from that this year CME was excellent in most aspects and fulfilled its purpose. Excellent effort. Quiz was very good idea.
- All Presentations were very good. Just I have a complaint, not complaint rather a request regarding chair which would be better if it is with attached writing desk.
- Am sitting in middle row, difficult to see the main slide projection.
- Animation videos for explanation of concepts of molecular biology, case study to explain concepts
- Approach to haematology an eye opener for investigations and can provide accommodations.

- Avoiding giving routinely tag. You can give, belt, other materials useful.
- Bleeding disorders. Speaker Excellent. But due to time limit, too speeds not get time to write of even see slides it is not in the presentation also. Suggest better time also. Please help us.
- Can be split into 2 sessions. Too much information for an hour.
- Can you please increase the font size in the slides
- case discussions and haemocytomorphometry were best lectures and clear out concepts very nicely.

- Diagnosis of Leukemia - The talk was too fast
- Divide tour of lab into 3-days & left to 45 minutes per day that'll be good
- During tour of labs it was difficult during low stations to below the explanation being given and it was little crowded & to see the screens as we could not stand closer
- Enlightening CME
- Excellent and clear n useful presentations. Thank u for organizing this type of presentations.
- Excellent case discussion, We would like to see few Peripheral smear / cases together with the CME
- Excellent perfect time management
- Excellent training program. I would recommend this course to all my juniors. Dr. Vikram& his faculty are inspiring &committed. God bless their endeavours
- Excellent. Lymphoma session was too long
- Except Coagulation lab, all lab tour - boring
- Few topics were covered a little fast so was little difficult to follow them.
- Good presentation but still topics regarding common Haematology can be improved
- Haem Lab I - No demonstration

- Haemocytomorphometry we are not familiar with it very well. Hence during the lecture could not able to follow very fast with the value
 - Have the sessions on the molecular before going to the lab
 - I actually come here for another programme because of the excellent teaching by Dr. Vikram&Dr.Biju
 - I feel very proud by attended the lectures excellent topic and lecture
 - I found that everything was too deep to understand at a PG Level. Could have been more Clinical. It's enough if we know just 5 important clues/points in each presentation which could have been stressed at our level.
 - Plz add more easy ways to learn / understand the concepts rather than too many graphs &nos
-
- In the case discussion -If someone had wrong answers- we should discuss why they thought of that answer. Coagulation pathway video was excellent-helps in understanding a lot new concept.
 - It was a excellent presentation by everyone. Combined approach of lab haematology and clinical presentation was very useful.
 - Kindly upload ppt on coagulation disorder thrombocytopenia
 - it was wonderful having listened to your lectures. You introduced haematology as a new scientific field which I was less exposed to in terms of knowledge and experience.
 - It would be helpful to have one more TV at front as the pathology slides are not veryclear just because the TV is far from the place.
 - Kindly allot at least one whole day for the tour of laboratories
-
- kindly avoid overlapping of topics between the speaker
-
- Kindly cut short the timing of presentations.
 - kindly include ppts as notes with articals give CD of ppts
 - Kindly keep sessions in auditorium which has gallery like. So that will not be difficult to see the screen.
 - Kindly make out the ApN in HPE Slides.
 - Kindly provide extra time For taking rest
 - Kindly reduce the lectures in the first day of the CMC
 - Lab tour needed little more explanation. Esp. cytogenetics
 - Laboratory evaluation of bleeding disorders talk was too fast. So could not follow it well.
 - Laboratory tour Molecular gene- couldn't able to follow. If too rapid presentation, Hemato,cytoexplanation was good
 - Long day maintained Good time management. Highly relevant topics. Could you please provide CDs with all the power point presentations on the last day. But since this is CMC. Serving pre packed lunch in plastic dishes with plastic cutlery does

result in waste of plenty food and a lot more of trash for the waste management program.

- Lunch interval need not be so long. Overall time can be reduced
- Molecular biology class could be explained, the basics in more detail for the clinical students.
- Molecular lab talk was difficult to understand
- Molecular lab tour could have been better concepts really couldn't understand
- More Clinical scenario discussion in each lecture to make it more interesting. Difficult to follow BM/Slides
- More of pathologic slides. We clinically can't appreciate much
- More time could be spent on Case discussion
- More time for the tour of laboratories to get a better idea
- Nice Lunch. Nice explanation from faculties. Continue this
- Not able to see the screen properly. Since today of bigger, station obscuring the screen. Seating arrangement should be like in the auditorium. Some times it feels boring and monotonous.
- Overall it was good. I expected more of clinical Scenarios. Please we don't need very indetailed mechanisms of every cells and cell counters.
- Pathology was more which was way beyond our understanding level
- Please add all slides to net. so we can get missed points. Especially lab. Evaluation of bleeding disorder.
- Please provide with the power point presentation of the CME online. It will be of great help for us.
- Please take necessary arrangement to make sure that the interesting topics are taken before lunch break of lab evaluation of coagulation disorder.
- Pls didn't give equal time to all presentations allow time as the exp & topic
- Pls give the slide of powerpoint presentation. Especially Coagulation
- Seating arrangement may be improved. Not able to visualise the presentation from back. More interactions with candidates.
- Some topics as were poor pathology - over the head for the MD medicine people
- Speaker was outstanding Dr. Sukesh had materials to fulfil our comprehension
- Tea break should be there in morning also. Give presentation to the participants by email or online
- The faculty should give their introduction so that we have some background about them
- The first session was a lengthy one might have given two tea breaks and please arrange accommodation.
- The groups were too big would have asked to see more of the path lab
- The lab evaluation of bleeding disorders session was too hasty.
- Although the slides were very informative, there was a whole bit which was missed.
- The online links for presentations is not working. Kindly do the needful and upload all the presentations.
- The Quiz was useful. It kept me awake.

- The tour of labs can be a bit more structured. Flowcytometry& molecular Sciences concepts were lastly initiated & completed
- third day was so interesting
- too much of pathology than medicine
- Too much of information loaded in short span of time
- Tour of labs - The groups were too big & time too short
- Tour of labs was very crowded and half of the group did not get to see / hear some things
- Tour was very informative. Discussion very good
- Try to provide Audio Visual in lab tour & process of Ix
- Usefullpls give atleast 1 min to answer for the quiz
- Very well organized. Lot of new concepts discussed very informative. Kudos! To the organizing committee.
- We couldn't clarify our doubts in lab tour.so sufficient time will be helpful
- We had good discussion today. I want discuss answers for use Quiz
- Well organized. But I personally find coagulation could have been a little more slow. Especially concepts which is always been tough to average students.
- Wise topics to choose for a Haematology conference. Great Efforts!!!
- Workshop can be planned
