

Comments (Verbatim)

- Excellent presentations and coordinator
- Kindly do not keep till 7pm and all sir, Getting exhausted
- The lectures are very helpful, the learning is better with a case based approach. More case discussions would be helpful
- Sessions could be made more interactive especially after lunch
- Very good lecture, Learned many things, very valuable
- Some topics are purely pathological, Well programmed CME, Thanks
- Few sessions were too faster. Very long session. Kindly provide the water in the hall
- Lab evaluation of bleeding disorder, please increase the session time.
- Overall good presentation, very useful
- Need many CME programs with case discussions
- Thank you CMC for each interactive teaching session. Happy to be part of CME
- Some power points were not available for downloading
- Laboratory evaluation of bleeding disorder would have been little session
- Well understood basic concepts
- Very much inspired after some talks. Thank you very much for the whole team
- Slides can be explained in little more elaborative manner
- Lab evaluation of bleeding disorder very fast. Make it confused
- More clinical oriented explanation could be done
- The coagulation disorder could have been session more time.
- Excellent programme, Keep it up
- Case discussion and hemocytomorphometry was excellent
- Giving the slides in PPT as educational material was good. We could focus on whatever in being told rather than take notes. Past found a few to be different
- Sessions are good, but back to back lectures are exhausting
- It is a very well organised CMC program, It is very useful to me and I learned many new concepts
- Kindly provide PDFs of all presentations in the education material including the cases. Some were missing
- Pleases put some clinical cases and discuss based on that.
- First day first session should always have a break for refreshment
- A truly inspiring academic part. Keep it up the excellent work
- Kindly give 5 to 10 mins break after every session
- A few length session should have been shifted to next day
- Session on bleeding disorder was really informative but I would like to have that presentation as study material for better understanding
- Please increase the number of PG strength so that some more benefited
- Case discussion could have been more interesting
- Kindly discuss concepts related to therapy of Leukemia like mechanism of action of chemotherapy agents
- Good CME. Nothing to more. Updates about the latest drugs must be added.
- Make more case presentations (Clinical Scenarios). While doing slide presentation
- Discussion of topics well nice. All laboratory tour programs were very useful when we are compared to some new techniques probably when we used in book only. Time maintenance & arrangement of lunch is also nice

- Tour Session - especially cytogenetics consisted of a long lecture, most of which was difficult to understand. It would be easier to explain as they show us the lab & procedure.
- Tour of laboratory could have more explaining the functioning of the machines rather than being theoretical again.
- Majority of lectures are very speedy. Difficult to grasp certain aspects.
- Kindly discuss HLA Matching
- As this involves both Non Clinical / Clinical branches. As we are clinicians we find difficulty with pathology slides, so kindly please give introduction to normal morphology. Spending 10 - 15 min before or class starts so that we too can follow
- Amazing effort!!! The case discussion was really great and the session on Dx of Lymphoma was great!!!. One request : Please upload all the PPTs!
- Really nice Session. Liked the case discussion a lot. Keep it up!!!
- Tour of the laboratories was very helpful. Especially for the pathology PGs. Kindly upload all the ppts. On the website as many of them are not available.
- Provide more time for lab visit and for hospital tour.
- Pathology discussion topics were little difficult to understand, Treatment regimen in difficult malignancy can be elaborated and taught
- During the quiz, please put up the time on slide as show. More of pathology session today.
- It would be nice if you could discuss the answers for the questions asked in quiz
- Quiz could have been placed during the latter half of the day. When a/f mind.
- Lab tour very useful to know about test & its Significance.
- Truly speaking not interested in hematology till yesterday, after the classes I am inspired to take hematology in my future, thank you for your great work.
- Some laboratory practice sessions be very helpful
- The tour of the lab was a crowded couldn't really hear what the presentation was explaining. Maybe it could have been in smaller groups (eg: 2 groups were merged in certain lab)
- The lower half of the slides projected are not visible at the middle & back rows. Otherwise all the programs are valuable & education.
- Sessions were elaborative & useful.
- Thank you for the education materials. Kindly add pdf's for a. Evaluation for bleeding disorders by Dr.Thulasi and b. hemocytomorphometry
- PCR and Flow Cytometry lab tour could have been made better. Case discussion was very good
- Good learned & real hematology concepts. Kindly request you to reduce the 1st day topic as it was really tired for a lot of in after travelling to get and concentrate on all the topics fully in the 1st day. Otherwise everything was A1.
- Thank you for taking for spill over room
- In the tour of laboratories, the flow cytometry discussion part can be improved. The explanation of concept was not clear
- Topics was rushed thorough - so much volume of information. Either you can increase the duration of CME for 3 - 4 days or encourage learning the educational material sent prior to the CME. Kind of pre CME test can be kept
- Well organised CME Program. It was very helpful. I feel pathology is covered more than clinical medicines
- Management and diagnosis can itself be a case discussion on long lectures. As it is very difficult to listen. And it stands in mind, if case based discussion.

- Well Co-ordinated session. Please provide case discussion scenarios in present
- Case discussion and laboratory is very informative
- Overall an excellent impression. A few more animated slides could be incorporated to explain basic concepts.
- Kindly make the Lymphoma - Leukemia. Classes more Clinical discussion based
- Very useful, academic feasts in haematology topics - especially the case discussions. May discuss more questions if time persists
- Diagnosis of Lymphoma topic was very fast, we were not able to follow, and Case may be discussed after finishing of every session.
- Kindly arrange more clinical case presentation, which could be shifted to morning session. Separate class for pathologist & medicine interns
- I would request to make the presentation bigger picture, algorithm-based and avoiding tiny details.
- We would really be benefited if we have postings in clinical hematology so that we would really know the holistic approach of a hemat patient.
- Very helpful. Especially for post graduates who are not exposed to recent advances in technology
- Excellent, Little more advertisement is required about the CME as people in the North East India have no idea that such a CME is Organised every year
- Clinical management should be concentrated
- Nicely organised CME overall
- Please consider clinical hematology postings for pathology register so we get exposed to the clinical side and my opt for hematology as a carrier option
- clinical aspects were covered too fast
- Thank you so much for the arranging CME has helped to clear all my doubts and given an idea to approach. Thank you all
- Not much useful for medicine PGs
- Than you CME for such interactive session. Many new clinical aspects of hematology, Laboratory aspects which many I have seen first time, Most importantly discipline of timing which was followed
- Pathology and medicine PGs can be deals separately. So that they acquire more knowledge on their subjects
- Please upload all the PPT presentation on the website, Well organised CME
- All sessions are very useful. Thanks a lot for wonderful teaching
- More pathology topics should have been covered
- Kindly give more concentration on Rx of topics
- Increase the number of CME Days, Good work by CMC, Credit to hematology Crew
- Groups are large to accommodate all
- To extend the time of presentations session of more, for example blood and blood products which is clinically more relevant in primary care setups
- After this CME, I came to know, basic concepts some lab tests for Bleeding disorders and Hemocytomorphometry
- Extraordinary program, well organised, well satisfied, have never attained such a CME before. Kindly distribute the 2nd day topics like Lymphoma, Leukemia etc., All the important topics for clinical seems to be grounded in the end day of the CME and we find it difficult to follow the entire topics due to its huge volume and less time for presentations. Thanking you for this Wonderful CME.
